

## WHY USA MEDICAL?

HealthCues has partnered with a full-service FDA approved COVID testing company located in Dallas. We provide medical assistants to help facilitate the tests and our FDA approved CLIA certified labs across the US can process over 400,000 tests per day.

During the pandemic, our team has provided sample collection, transportation, and COVID-19 testing to colleges and universities, government agencies, public corporations, hospitals, restaurants, and hotels. We have processed over 2 million COVID tests during the pandemic.

## HOW RELIABLE IS THE TEST?

We use Thermal Fisher Technology which is 100% accurate and 100% sensitivity which produces results of: Positive, Negative or Inconclusive (avoids false negatives/positives). It also Detects new COVID strains. Delta, Delta Plus, Lambda, and Omicron.

## WHY SHOULD WE TEST FOR COVID-19?

Without knowing the specific prevalence of COVID-19, it's tough to make informed decisions about safeguarding. Because many people are asymptomatic, they may be carrying the COVID-19 virus but may not have any symptoms. Testing will help identify and isolate infected individuals reducing the need for large scale quarantines.

## HOW DOES THE TESTING PROCESS WORK?

We provide everything needed for testing including a nurse. We will work with you and your staff to design and implement a simple process that minimizes disruption. Our nurses will come to tests weekly or as often as you desire. Our nasal swab is non-invasive, and results will be uploaded onto our portal within 24 to 48 hours.

## WHAT IF A TEST COMES BACK POSITIVE?

If an individual tests positive, we will report the results to the Department of Health and also notify you and the person that tested positive. We can also provide a tele-medicine online doctor to the person who tested positive in case they have questions or need medicine. All at no cost.

Offered by your local Agency:  **800-391-7231**
